

Special Issue

Spatial Optimization and GIS

Message from the Guest Editors

The ongoing revolutions in high-performance computing and in the collection and analysis of spatial data, combined with continued development and refinement of optimization solution procedures, are fundamentally changing the landscape for performing spatial optimization in the context of geographic information systems (GIS). The demand for spatial optimization regularly extends to new domain areas. The size of problems that can be approached with optimization grows as the bounds of tractability are pushed outward with increased computing power and sophisticated solution procedures. Taken together, these developments have altered the ways in which spatial optimization in GIS can be performed and how those analyses can contribute to both theory and practice. This Special Issue is dedicated to examining the changing practice of spatial optimization in the context of GIS, identifying the current frontier of the possible in this field, and identifying challenges and opportunities for continued development in the future. All papers—whether theoretical or applied—that address issues of spatial optimization in the context of GIS are welcomed.

About the Journal

Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

Editor-in-Chief

Prof. Dr. Wolfgang Kainz
Cartography and Geographic Information Science, Department of
Geography and Regional Research, University of Vienna,
Universitätsstr. 7, A-1010 Vienna, Austria

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Remote Sensing) / CiteScore - Q1 (Geography, Planning and Development)
