Characterization of Extracellular Vesicles in Disease

Message from the Guest Editor

Extracellular vesicles (EVs) are entities known to be released from all cell types, which contain signaling components such as proteins and nucleic acids enclosed by a lipid membrane. What was initially believed to be an unspecific secretion product has turned out to be a cell-type specific means of inter-cellular communication. The population of EVs is heterogenous with regard to the mode of biogenesis, size and cargo. Cargo signatures and their dependence on the (patho-)physiological status of the cell of origin as well as the mechanisms of specific detection of the recipient tissue are currently being investigated with the aim of defining EV-biomarkers and better understanding this communication route. In order to make progress in this field, analytical techniques are refined and frequently employ -omics technologies, such as proteomics and next-generation sequencing of RNAs. This Special Issue invites contributions from this exciting research field with a special emphasis on the molecular characterization of extracellular vesicles depending on the physiological state of the secreting cell type and the recipient tissues.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
