Hydrogen Sulfide (H₂S)-Donor Molecules: Chemical, Biological, and Therapeutical Tools

Message from the Guest Editors

Hydrogen sulfide (H₂S) has been recognized as the third endogenous pleiotropic gasotransmitter, along with nitric oxide and carbon monoxide, playing a significant role in many biological processes. Since endogenous concentrations of this gaseous signaling molecule are generally low, to better define its physio-pathological functions, exogenous sources of H₂S are needed. On this basis, the challenge for many research groups is the development of H₂S-donor molecules that are able to release H₂S in a tightly controlled way, mimicking the physiological production of this gas. Thus, the identification of novel chemical tools could be useful to further investigate the involvement of H₂S both in health and disease states. The aim of this Special Issue is to collect novel research regarding H₂S-releasing compounds as innovative pharmacological tools and to provide further evidence of the crucial role of H₂S in physiological and pathological processes. **Keywords:** hydrogen sulfide (H₂S); H₂S-donors; hybrids; pharmacological tools; cell signaling

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
