Activation, Proliferation and Migration of Endothelial Cells under Normal and Pathological Conditions

Message from the Guest Editor

The role of vascular endothelium in understanding the mechanisms of various diseases is difficult to overestimate. Especially after the COVID-19 epidemic, when, due to the similarity of the protein composition of the receptors of the ciliated cells of the airways and vascular endothelium, various, and often very severe, complications developed following the disease. It has long been known that the endothelium of elastic-type arteries is involved in the pathogenesis of atherosclerosis, and the endothelium of this and other parts of the vascular bed is involved in the pathogenesis of many other diseases. Knowledge of the mechanisms associated with damage to this endothelium and its subsequent repair is very important now. Although tremendous progress has been made recently in deciphering the molecular mechanisms of vascular endothelium functioning. Most of these discoveries were made in vitro. It is necessary to bring this knowledge to the tissue level. Additionally, rather little information is available on the role of itracell, ulat transport and endocytosis within endothelial cells. We would greatly appreciate all researchers to contribute to this Special Issue.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
