Molecular Mechanisms of the Pro-healthy Effects of Exercise

Message from the Guest Editor

The positive impact of well-chosen physical exercise in the prevention or slowing down of the development of lifestyle diseases is indisputable. However, the need to study the effect of exercise on the body is still high. Increased and improved techniques and research methods, the development of biological sciences, and the detection of new myokines mean that the full picture is far from complete. Moreover, new forms of training are being proposed that allow us to limit the time and maximize the effects of physical work. The body's response to exercise depends on many factors. Therefore, selection of the optimal form of physical activity is still a challenge, which can be solved by detailed biochemical and molecular determinations. In particular, we are still far from explaining the impact of physical activity on a cellular level, both molecular and biochemical, as well as its effect on signalling pathways. All of this means that there is a great need for research, where the physiological changes induced by exercise can be explained by the molecular changes in a specific tissue or cell.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
