Tackling New and Reemerging Infectious Diseases through the Development of Novel Anti-infectives

Message from the Guest Editors

The multiple challenges to the endemic, epidemic, and pandemic of infectious diseases call for a worldwide, systematic approach to quickening the efforts to discover pharmacological agents against new and reemerging infectious diseases. For example, no specific drugs are currently available to treat COVID-19. Although vaccines for Covid-19 are available, the urgency to identify effective drugs (i.e., antivirals) remains as, on a large scale, immunization reaches its effectiveness outside the time frame allowed to handle a potentially catastrophic pandemic. Moreover, antiviral drugs' association with vaccines represents an ideal pharmacological strategy to control the viral spread. The characterization of pathogen biology, pathogenesis, and host-response genomic pathways across multiple infectious agents, offers the possibility to find new targets of interventions (e.g., crucial enzymes), which serve as broad-spectrum drug targets. They can be modulated by novel or repurposed therapeutic modalities and will similarly impact numerous pathogens. In this special issue, we invite authors to publish research articles and review articles relating to the topic.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
