Renin-Angiotensin System in Health and Diseases

Message from the Guest Editor

Renin-angiotensin-aldosterone systems (RAAS) play critical roles in the regulation of blood pressure (BP), body fluid homeostasis, and cardiovascular function. Various tissues, including the heart and kidneys, possess individual locally regulated RAASs. Overactivity of the cardiac RAAS is associated with cardiac diseases, including cardiac hypertrophy due to volume and/or pressure overload, heart failure, coronary artery disease with myocardial infarction, and hypertension. The overactivity of the renal RAAS is associated with various kidney diseases such as nephropathies and renal artery stenosis. RAAS blockade with angiotensin-converting enzyme inhibitors (ACEIs) and/or angiotensin receptor AT(1) blockers (ARBs) is very useful for the treatment of arterial hypertension, chronic heart failure (CHF), chronic kidney disease (CKD), atherosclerosis, and diabetes. The purpose of this Special Issue is to present the current efforts in the involvement of the RAAS in the molecular mechanisms underpinning hypertension, CHD, and CKD, as well as procoagulant processes throughout COVID-19, from the viewpoint of pathogenesis of organ complications as well as clinical outcomes.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
