Molecular Biology of Lung Cancer: From Intrinsic to Acquired Resistance Mechanisms

Message from the Guest Editor

Dear colleagues, Overall, lung cancer remains one of the major causes of cancer-related deaths worldwide. Despite the big efforts in ameliorating therapeutic strategies, both intrinsic and acquired resistance represent a concrete obstacle to the effectiveness of long-term treatment, resulting in ineffective therapeutic action and poor prognosis of lung cancer patients. Resistance mechanisms currently include genetic mutations and/or epigenetic changes, unregulated overexpression of drug efflux pumps, reduced oxygen availability, genomic instability and other pathological molecular events. In this context, the deregulation of epigenetic mechanisms, as well as DNA methylation, histone modification, and non-coding RNA regulation, could contribute to tumor resistance. To this purpose, a comprehensive overview of the current knowledge about several mechanisms responsible for targeting genetic and/or epigenetic factors linked to therapeutic resistance could be an effective strategy to reverse or overcome acquired drug resistance in patients with solid cancer, particularly in lung cancer patients.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
