Recent Advances in Allergen Analysis

Message from the Guest Editor

Allergen analysis involves the identification, quantification, and characterization of allergenic substances in various samples, such as foods, environmental samples, and clinical samples. The goal is to determine the presence and concentration of specific allergens, which are substances that can trigger allergic reactions in sensitive individuals. Allergen analysis plays a crucial role in food safety, environmental monitoring, and understanding allergic diseases. Various methods are used to detect allergens, including molecular, immunological, and biochemical techniques. These methods aim to identify allergenic proteins or DNA sequences associated with allergens. Advances in allergen analysis techniques continue to emerge, contributing to improved accuracy, sensitivity, and speed of detection. Researchers and industries strive to develop methods that can better accommodate complex matrices, such as processed foods, and enhance the safety of individuals with allergies. It is the aim of this Special Issue to showcase the recent advances in analytical methodologies.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
