Advances in Clostridial and Related Neurotoxins

Message from the Guest Editor

Botulinum Neurotoxins (BoNTs), the causative agents of the potentially lethal vertebrate disease botulism, comprise a family of protein toxins produced by various bacterial strains of the genus *Clostridium*. In recent years, discoveries of novel BoNTs, as well as potential BoNT homologues in other organisms, have challenged this categorization and expanded the family of BoNTs. Further identification and characterizations of novel and known BoNTs will yield insight into the evolutionary forces driving the diversity of this protein toxin family. Furthermore, genetic methods now allow for construction of recombinant and chimeric BoNTs, enabling directed engineering of BoNTs with defined amino acid or functional domain substitutions. Combined with ongoing structural analyses, these studies will lead to a deeper understanding of the molecular mechanisms underlying the toxicity and pharmacologic potential of the large family of BoNTs. Both approaches, exploring novel BoNTs and recombinant studies, are exciting avenues of research with the potential to open the doors to unlocking the underlying molecular and evolutionary mechanisms of the high potency of BoNTs.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
