Light-Dependent Control of Metabolism in Plants

Message from the Guest Editors

The photoreceptors of plants sense the alterations in the intensity and ratio of UV-B, blue, red and far-red spectral components, and the metabolism is modified through light-responsive signalling pathways. In this signal transduction, reactive oxygen species and antioxidants are especially important because of the redox sensitivity of many transcription factors and enzymes, as well as the need for reductants or oxidants in several reaction steps. The light-dependent control of basic metabolic pathways such as carbon and nitrogen metabolism will also affect the growth and development of plants. A better understanding of this regulation is also important for agriculture, since the determination of the optimal light conditions for indoor farming will result in increased yield. This Special Issue will present and discuss the physiological, biochemical, and molecular biological effects of changes in light intensity and spectrum on the metabolism in plants, showing the regulatory mechanisms and causal relationships between changes in light conditions and various metabolic pathways.

Guest Editors

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
