Noncoding RNAs as New Instruments in the Orchestration of Cell Death and Cancer Therapy Resistance 2.0

Message from the Guest Editors

Dear colleagues, Increasing evidence shows that ncRNAs function either as tumor suppressors or oncogenes by regulating one or several cancer hallmarks, including evading cell death, metastasis, and drug resistance. Cancer therapy resistance is a major challenge in clinics and scientific research, resulting in tumor recurrence and metastasis. Among them, ncRNAs have been shown to regulate drug resistance by targeting drug resistance-related genes or influencing genes related to cell proliferation and cell death. This Special issue will focus on the recent advances in “Noncoding RNAs as New Instruments in the Orchestration of Cell Death and Cancer Therapy Resistance”, including new findings concerning ncRNAs that modulate apoptosis, autophagy, and other programmed cell death and cancer resistance pathways, as well as emerging data on miRNA–lncRNA interactions that affect cell death regulation and mechanisms of resistance to therapy. Current research progress on ncRNAs for clinical and/or potential translational applications, including the identification of novel therapeutic approaches for ncRNA targeting and delivery strategies, will be also appreciated.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Inorganic Chemistry)
