

Special Issue

Modeling Distributed Information Systems

Message from the Guest Editor

Formalisms and mechanisms for dealing with distributed systems mostly originate from the era of centralized concurrent systems and have been extended to distributed systems. Those approaches are unrealistic, taking into account the natural locality of decisions in distributed systems, lack of global state, asynchrony of communication, local action autonomy, inevitable nondeterminism, etc. We are launching a Special Issue on such aspects of modeling, specification, verification, and simulation of distributed systems. Suggested topics:

- Integrated Model of Distributed Systems;
- Communication duality in distributed systems, Lauer-Needham postulate;
- Algebraic models of distributed systems;
- Asynchronous specification of distributed systems;
- Automata-based modeling of distributed systems;
- Timed/Probabilistic specification and verification of distributed systems;
- Automated deadlock detection in distributed systems;
- IoT protocols verification;
- Static analysis of distributed systems;
- Distributed termination;
- IMDS vs. other models of distribution;
- Modeling code mobility in distributed systems.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo

School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

CiteScore - Q2 (Information Systems)
