Research on Synthesis, Sintering and Properties of New Inorganic Materials under High Pressure and High Temperature

Message from the Guest Editor

The synthesis and application of materials under extreme conditions is a research hotspot and frontier of material science. In recent years, with the rapid development of high-pressure science and technology, the fields of physics, chemistry, material science, geoscience, and other disciplines have seen significant development. Especially in materials science, high pressure will change the interaction between atoms and molecules in materials, cause material structure phase transition, and change the properties of materials. The goal of this Special Issue is to showcase the latest achievements of high pressure in the field of inorganic materials and promote the development of inorganic material research. Papers in this Special Issue on “Research on Synthesis, Sintering, and Properties of New Inorganic Materials under High Pressure and High Temperature” can be experimental or theoretical calculation research results on structural transformation, material modification, nanomaterial preparation, material sintering, and so on under high pressure.

About the Journal

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and Inorganics offers authors the opportunity to publish exciting new research in an open access format.

Editor-in-Chief

Prof. Dr. Duncan H. Gregory

School of Chemistry, University of Glasgow, University Avenue, Glasgow G12 8QQ, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Inorganic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.7 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
