

Special Issue

Periodic Law and Systems of Chemical Elements: Yesterday, Today, Tomorrow

Message from the Guest Editor

At present, there are three main problems associated with the systematization of chemical elements. First, how many chemical elements exist and what are the regularities of their mutual arrangement in the periodic system. Second, if there are any quantitative (i.e., expressed by a strict mathematical formula) regularity between at least some property of a chemical element and the charge of its nuclide. Third, the search for new and improvement of existing variants for the interpretation of the Periodic Law in order to identify the most optimal among them. Therefore, the first two of these problems, despite the simplicity of their formulations, still do not have an unambiguous answer; as for the third problem, the total number of interpretations of D.I. Mendeleev's Periodic Law is already more than 1000 and continues to grow from year to year, and the question of which of them should be considered the most closely corresponding to the formulation of the Periodic Law remains open. This Special Issue is intended to include primarily original full papers and brief communications on any research that in one way or another aims at solving any of the three above problems.

About the Journal

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and Inorganics offers authors the opportunity to publish exciting new research in an open access format.

Editor-in-Chief

Prof. Dr. Duncan H. Gregory

School of Chemistry, University of Glasgow, University Avenue, Glasgow G12 8QQ, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Inorganic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.7 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
