## Insect Signals

### Message from the Collection Editors

In this Special Issue, we will focus on the role signals, both intrinsic and extrinsic, and their associated downstream pathways have on insect biology and behavior. The recent advances in sequencing methods and gene editing/silencing techniques have significantly advanced our understanding of how diverse signals (hormonal, peptidal, pheromonal, environmental, and/or dietary-based) influence insect behavior. Here, we seek to highlight various aspects of insect signaling systems and welcome papers dealing with any aspect of those systems including structural elucidation, functional characterization of a gene(s), and/or responses triggered at the cellular or organismal levels by a signal. In case of doubt as to whether your manuscript might fall within the scope of this Special Issue, please send either of us an abstract. Dr. J. Joe Hull

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological  
Sciences Building, Athens, GA 30602-2603, USA

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,  
PMC, PubAg, and other databases.

##### Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 17 days after  
submission; acceptance to publication is undertaken in 2.8  
days (median values for papers published in this journal in  
the first half of 2024).
