

Special Issue

Advanced Research on Forensic Entomology

Message from the Guest Editors

In advanced forensic entomology, a multidisciplinary approach has an increasing importance because it involves fields such as taxonomy, legal and veterinary medicine, morphology, molecular biology, and applications of new techniques. Examples of this multidisciplinary approach include studies on the biology and ecology of necrophagous species that are also predators of other necrophagous insects. These species may interfere with the colonization of human and animal bodies by insects of forensic interest, relevant to estimate the post-mortem interval, or with the forensic evaluation of post-mortem damages. These studies should also consider the role of other species reported in human and animal bodies of which the possible forensic relevance has not been ascertained. This Special Issue includes original research articles and case reports involving multidisciplinary approach and taxonomic identification of the species involved, and experimental studies on animal models in different environments, aiming to obtain experimental evidence on the succession of species colonizing corpses and approaches using new techniques.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
