Special Issue

Climate Change and Insects

Message from the Guest Editors

This Special Issue aims to collect recent findings on the effect of climate change on insects—from single species to communities, distribution, life cycle impacts, arthropod-plant interactions, insect pathology, ecosystem services, as well as plant protection strategies in agriculture, viticulture, horticulture, and forest systems. Even aspects of apiculture and wild pollinators will be targeted. Topics of particular interest include ecology, physiology, behaviour, modelling, plant protection strategies, but also big data approaches that may be useful to fully understand the effect of climate change challenge to insects.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler
Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:
JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
