

Special Issue

Pest Control in Glasshouses

Message from the Guest Editor

Invertebrate pest control within the glasshouse environment continues to present many challenges. Increasing consumer concern over the use of chemical pesticides, coupled with increasing reports of chemical resistance, is continuing to pressurise the protected horticultural industry to continue to seek alternative means of pest control. This special issue will include original research articles and reviews by leading research entomologists and associated experts. Articles will focus on the biology and ecology of various major glasshouse invertebrate pests (both indigenous and invasive species) and on advances made in regards to their control. Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
