Management and Challenges in Peripheral Arterial Disease

Message from the Guest Editors

Atherosclerotic peripheral artery disease (PAD) is a major manifestation of cardiovascular disease. More than 200 million individuals worldwide suffer from PAD and such patients have amongst the highest morbidity and mortality rates. In addition, the associated costs are even higher than after stroke, as shown in recent population-based studies. Recent advances, including antiplatelet and lipid-lowering therapies, along with innovations in endovascular treatment, such as thrombectomy, atherectomy, and lithotripsy, have created great opportunities to improve treatment algorithms in PAD and, possibly, patient related outcomes. Nonetheless, there is a clear need for novel evidence-based treatment strategies to effectively treat PAD patients and reduce the burden of the disease.

These encompass pharmacologic as well as endovascular and surgical strategies. PAD treatment has been the focus of major global efforts to improve diagnostic, therapeutic, and preventive strategies. The aim of our Special Issue is, thus, to collect original articles and reviews investigating pathophysiologic, diagnostic, and therapeutic aspects related to the management of PAD.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Thomas Brand
National Heart & Lung Institute, Imperial College London, South
Kensington Campus, London SW7 2AZ, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cardiac and Cardiovascular Systems) /
CiteScore - Q2 (General Pharmacology, Toxicology and
Pharmaceutics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 22.9 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2024).
