The Maladies of New Motherhood: Negative Mood Symptoms, Postpartum Functioning, Current Interventions, and Protective Factors

Message from the Guest Editor

Motherhood is replete with joys and stressors, and marks a period of transition for both first-time mothers and those with other children. The term “spiraling out” describes the adjustment process, which in healthy, well-resourced women should theoretically accelerate over time. However, a significant portion of women are faced with complicated circumstances, including physical/mental health comorbidities or strained resources. For these reasons, mothers represent a vulnerable yet vitally important subgroup of society. This Special Issue will focus on a broad spectrum of mental and emotional health issues in mothers, including negative mood symptoms, postpartum functional status, current interventions, and protective/risk factors. I look forward to receiving your contribution.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
