Current Updates and Advances in Breast Cancer

Message from the Guest Editor

Breast cancer is a highly heterogeneous disease and represents the leading tumor diagnosed and the most frequent cause of cancer death in women worldwide. Breast cancer develops following complex interplays between genetic and non-genetic factors, interacting with the hormones that regulate mammary development. Hereditary and familial cancers account for up to 20–30% of all breast cancers. Considering age, about 25–30% of women are >70 years old, and around 6–7% are young (
