Intelligent Security and Privacy Approaches against Cyber Threats

Message from the Collection Editor

As many organizations have moved to work from home, cyber attackers have expanded their advanced persistent threats (APT), such as phishing, spear-phishing and zero-day attacks, to exploit vulnerabilities of home networks. It is urgent to develop well-designed privacy security approaches, algorithms, protocols, standards and policies for safeguarding home and organization networks against new cyber threats. Topics of interest include but are not limited to: - Intelligent security practices and model-based AI against COVID-19 threats; - Privacy-enabled human factor models against COVID-19 cyberattacks; - AI-based Intrusion Detection Systems for discovering COVID-19 cyberattacks; - AI-based cognitive models against COVID-19 cyberattacks; - Privacy-driven human analytical behaviours in home networks; - Privacy-preserving algorithms and approaches for protecting data of home networks; - Secure Big Data analytics to analyze heterogeneous IoT and home elements;

Author Benefits

High Visibility:

indexed within Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 32.4 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2024).

Journal Rank:

CiteScore - Q1 (Computer Science (miscellaneous))
