

## Special Issue

# Recent Advances in Graphene-based Nanocomposites

### Message from the Guest Editor

Graphene has attracted significant interest due to its unique properties, such as very high thermal conductivity, high electron mobility at room temperature, large surface area, high modulus of elasticity and good electrical conductivity. These properties make it an ideal material for a wide range of applications, including sensors, batteries, supercapacitors, hydrogen storage and reinforcing fillers. The main aim of this Special Issue is to collect recent works that address any of these issues. Recent works on composites filled with any graphene related material that are focused on reinforcing the mechanical, electrical or thermal properties of a polymer matrix are welcome. Papers presenting studies on preparation methods and modelling of factors that affect the properties of graphene/polymer composites and recent advances on composite coatings, bulk and highly ordered composites or 3D graphene composites are also welcome. Going towards the development of novel and creative functionalities research on (multi)functional nanocomposites with great potential to open the door to novel revolutionary applications, are particularly encouraged to participate in this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Dr. Francesco Tornabene

Department of Innovation Engineering, University of Salento, 73100  
Lecce, Italy

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid  
by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec,  
CAPlus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q2 (Materials Science, Composites) / CiteScore - Q1  
(Engineering (miscellaneous))
