

Special Issue

Advanced Materials for Energy Storage/Conversion and Sustainable Processing Based on Electrochemical Processes and Related Characterization Methods

Message from the Guest Editors

This Special Issue of *JETA* will present the latest developments in the research on advanced materials for the electrochemical devices that are employed in energy storage/conversion and processing. A specific focus of the Issue is the description of the characterization methods employed in the study of the electrochemical devices of interest. Among the various electrochemical devices, special attention will be dedicated to innovative batteries and related technologies. In the latter case, the contributions will mostly provide insight into the design, synthesis, and characterization of novel materials for innovative and non-conventional battery technologies. In conclusion, it is expected that this Special Issue of *JETA* will serve as a valuable resource for researchers and practitioners in the field of materials science for the electrochemical applications of major interest in the present time.

Guest Editors

Prof. Dr. José Solla Gullón

Dr. Danilo Dini

Dr. Daniele Passeri

About the Journal

Message from the Editor-in-Chief

The intricate relationship between theory and experiment is the cornerstone of engineering progress. At the Journal of Experimental and Theoretical Analyses (JETA), we are committed to exploring these connections through rigorous and innovative research. The journal is a dedicated platform for presenting pioneering analyses that push the boundaries of what is possible in engineering.

Our journal serves as a crucial nexus where theoretical insights meet experimental validation, advancing the understanding of complex engineering phenomena. The comprehensive exploration of these topics not only contributes to academic knowledge, but also leads to practical applications that address real-world engineering challenges.

Editor-in-Chief

Prof. Dr. Marco Rossi

Department of Basic and Applied Sciences for Engineering, Sapienza
University of Rome, Via A. Scarpa 16, 00185 Rome, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

Rapid Publication:

first decisions in 16 days; acceptance to publication in 5.8 days (median values for MDPI journals in the first half of 2024).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
