

## Special Issue

# Overtraining Prevention

### Message from the Guest Editors

Performance enhancement requires a delicate balance between training and recovery to avoid the negative consequences of training. This Special Issue aims to collect a series of original and review papers on the topic of functional/nonfunctional overreaching and overtraining syndrome prevention. After the publication of the ECSS/ACSM (Meeusen et al. 2006 and 2013) consensus statement, it has been easier to compare results from different research groups. However, there is still a lack of information regarding elite athletes, master athletes, and youth athletes competing at very high levels (i.e., youth Olympic games). In particular, master athletes have to fit training into already very busy schedules, and this balance might be even more delicate in such cases. Therefore, recovery strategies and training monitoring need to be optimized both for elite and master athletes. Key paper topics include, but are not limited to, the following: Training monitoring for the prevention of nonfunctional overreaching; Case studies on nonfunctional overreaching/overtraining syndrome; Enhancement of recovery strategies to optimize performance.

#### Author Benefits

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed,  
PMC, FSTA, and other databases.

##### Journal Rank:

JCR - Q1 (Sport Sciences) / CiteScore - Q2 (Physical  
Therapy, Sports Therapy and Rehabilitation)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.9 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the first half of 2024).
