

Special Issue

Coastal Landslides and Hazard Assessment

Message from the Guest Editor

Coastal communities are increasingly facing challenges from rising sea levels, increased rates of erosion and the impacts of warming seas on wildlife and habitats that support livelihoods. Coastal landslide activity is likely to increase under future climate change with projected increases in storminess, precipitation, erosion and wave activity putting additional pressure on infrastructure and communities located within the coastal zone. To develop resilience to this changing environment, 'wholescape process understanding' assesses and quantifies the interaction of natural processes that drive coastal change. These include hydrogeological, geological, geotechnical, ecological, coastal and marine processes, as well as human interactions and behaviour, all over different spatial and temporal scales. This Special Issue focusses on advances in wholescape process understanding, monitoring and characterising coastal landslide processes, nature-based solutions aimed at mitigating coastal degradation and novel approaches for hazard assessment at the coast.

About the Journal

Message from the Editor-in-Chief

The *Journal of Marine Science and Engineering (JMSE, ISSN 2077-1312)* is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.

Editor-in-Chief

Prof. Dr. Charitha Pattiaratchi

Oceans Graduate School and The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia

Author Benefits

High Visibility:

indexed with Scopus, SCIE (Web of Science), GeoRef, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Engineering, Marine) / CiteScore - Q2 (Civil and Structural Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
