

## Special Issue

# Recent Advances in Oral Diseases

### Message from the Guest Editors

Oral diseases are known for their wide prevalence globally, leading to a deterioration of general health if they are left unmanaged. Dental caries, periodontal disease, tooth loss, and cancers of the lips and oral cavity are the most prevalent oral diseases, contributing to a global burden. Personalised dentistry is a new avenue for the early diagnosis and effective treatment of oral diseases. Innovative avenues and platforms to either further the understanding of the pathobiology of oral diseases or effectively manage patients diagnosed with these conditions and lesions are of most need. This Special Issue therefore focuses on the recent advances and developments of oral diseases from bench to bedside in order to improve the standard of care for patients with these conditions and lesions.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
