

Special Issue

Price Volatility in Financial and Commodity Markets

Message from the Guest Editors

Modeling financial and commodity market volatility is a widely studied topic in financial econometrics literature due to its importance for financial applications such as pricing, hedging, risk management, and other related issues. In recent decades, researchers have proposed several extensions of the original models to reproduce the different stylized facts that characterize asset returns. Moreover, through the availability of ultra-high-frequency data for asset prices, researchers have computed new ex-post volatility measures at a lower frequency level, so new models on the conditional variance of returns have been spread in the literature. Thus, in this Special Issue, we invite submissions related to recent advances in volatility modeling and forecasting such as component models, nonlinearity, volatility spillovers, the effect of exogenous variables and jumps, and other related issues. Additionally, original contributions to multivariate volatility models will be appreciated.

About the Journal

Message from the Editor-in-Chief

Researchers are most welcome to contribute original research articles or comprehensive review papers for consideration and publication in *Journal of Risk and Financial Management (JRFM)*, an on-line, open access journal. *JRFM* adheres to rigorous peer-review as well as editorial processes, and publishes high quality manuscripts that address theoretical, practical and empirical issues in analysing real life financial data. The goal of *JRFM* is to enable rapid dissemination of high impact research to the scientific community.
