Special Issue

Ground Deformation Monitoring via Remote Sensing Time Series Data

Message from the Guest Editors

The aim of this Special Issue is to collect papers (original research articles and review papers) that offer insights into effectively monitoring and measuring land deformation using remotely sensed time series data. This Special Issue will welcome manuscripts that link the following themes:

- New time series analysis methods for ground deformation monitoring;
- Applications of existing time series or data processing methods in Earth's surface monitoring;
- A combination of different techniques, such as InSAR, LiDAR, GNSS, CRP, etc., for ground deformation monitoring and change detection using advanced artificial intelligence models.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
