

Special Issue

The Role Played by Agriculture in Inland Areas

Message from the Guest Editors

Inland areas can enable the creation and preservation of environmental resources (water, air, and soil), the generation of renewable energy, etc. if they are properly valorized. This is especially true for places with low growth rates that are the poorest and whose economic and social development cannot neglect the engagement of these areas' potentials for development. The availability of ecosystem products and services (water, air, territories, forests, biological diversity, landscape, complex ecological systems, etc.) for the agri-food chain and for the generation of renewable energy depend on these regions. In this Special Issue, we will examine the role that agriculture plays in inland regions in an effort to emphasize how it might help to reverse (or at least slow down) this process of marginalization. Additionally, we want to comprehend which agricultural policies should be implemented in order to ensure the survival of farms in these regions and enhance their productivity.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
