

Special Issue

The Belt and Road Initiative's Land Use and Land Cover Change and Impact on the Environment

Message from the Guest Editors

There has not been much investigation and documentation of BRI's land use and land cover change and impacts on the environment. Examining BRI's environmental impact is very important to assess and understand the BRI initiative. This Special Issue documents land use, land cover, and landscape change. The topics include but are not limited to: Landscape changes at country, regional (g., China–Pakistan Economic Corridor) or the entire BRI scale;The direct effects of BRI on natural resources, such as arable land, water, energy, and mining, and the indirect effects on ecology, geology, environment, and landscape;The effects of BRI on food and water security at local, regional or global scales;The effects of BRI on social–economic–environmental system sustainability;Environmental impact evaluation of transportation construction in BRI countries.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief
