

Special Issue

Remote Sensing Application in Landslide Detection and Assessment

Message from the Guest Editors

Remote sensing technology has had a pervasive impact on tackling environmental issues and disaster risk management. Notably, these benefits have been substantial for research and monitoring of phenomena like landslides and other mass movements, which are often difficult to access and hidden under thick vegetation cover. Indeed, remote sensing techniques are now widely used for the early detection of ground deformation, the implementation of warning systems in case of imminent landslide triggering, and the medium- and long-term slope instability monitoring supporting prospective modeling. This is particularly important considering that landslide occurrences may be exacerbated by extreme weather events, which are growing in frequency due to ongoing climate change. The present issue is thus timely to share and discuss the state of the art and the remaining challenges in the field of landslide hazard and disaster risk remote sensing: (1) applications of existing methods; (2) technological developments; (3) processing developments, including new algorithms. If potential authors wish to discuss any additional topics, please feel free to contact the special issue editorial team.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
