

Special Issue

Influence on Soil Quality of Agriculture and Forest Management: Assessment, Mitigation and Best Management Practices

Message from the Guest Editors

Forestry and agriculture practices for non-food and food production have impacted both physico-chemical and biological soil features worldwide. In particular, inappropriate forest management and the over exploitation of agricultural lands lead to a loss of fertility, soil quality, and soil resilience, which can jeopardize biodiversity, create hydrological concerns, and increase desertification. Hence, the current Special Issue aims to collect new insights into the influence that forestry and agriculture have on soil, and to gather best practices or new strategies to follow for improving the sustainability of both sectors. For more information, you can find it via the following link:

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
