

## Special Issue

# Genomic and Transcriptomic Alterations in Cancer and Aging

### Message from the Guest Editor

Carcinogenesis is widely associated with genomic and transcriptomic alterations, including genetic mutations (base substitutions, insertions, deletions, and chromosomal rearrangements), copy number variations, changes in mRNA and noncoding RNA expression levels, and alternatively spliced variants. All these changes also occur during aging that, in turn, is a major risk factor for cancer development. In both cases, the key question is how genomic and transcriptomic alterations support cancer initiation and progression and what their contribution to aging is. The close interconnection of cancer and aging implies the possibly shared mechanisms underpinning the two processes. However, the causative relations are not straightforward, as these processes are fundamentally opposite in the context of cell biological functioning. A better understanding of cancer and aging biology will allow revealing the molecular connections that presently remain unclear.

## About the Journal

### Message from the Editor-in-Chief

*Life* (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

### Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona  
Institute of Science and Technology, 08028 Barcelona, Spain

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
