State-of-the-Art in STAT Protein

Message from the Guest Editor

The signal transducer and activator of transcription (STAT) protein family consists of latent cytoplasmic transcription factors. Since the first discovery of STAT in the 1990s, its structure, activation, function, and regulation have been investigated in a great deal of pathophysiological situations. Seven STAT genes in mammalian genomes have been identified so far; namely STAT1, STAT2, STAT3, STAT4, STAT5A, STAT5B, and STAT6. Furthermore, the STAT pathway is connected to the Janus kinases (JAK) family protein, and able to integrate inputs from various signaling pathways. This is why STAT is a potential key mediator in diseases. This Special Issue aims to gather contributions on review and primary research articles, aiming to update and advance the current knowledge on STAT proteins. The suggested potential topics are not restricted to STAT itself, but also its related protein or involved pathways. Your diverse works will help to clarify the STAT protein, forming numerous insights into many diseases.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
