Advances in Theranostic Biomarkers in Lung Diseases

Message from the Guest Editors

Theranostics is an emerging field in which diagnosis and specific targeted therapy are combined to achieve a personalized treatment approach. The selection of theranostic markers allows a promising therapeutic paradigm involving diagnosis, drug delivery, and monitoring of treatment response. The detection of numerous theranostic markers is necessary to administer effective therapy to patients with different pathological conditions, including lung diseases. Theranostic approaches in respiratory medicine are an important research topic with the aim of phenotyping different patients. Theranostics is appreciated in multiple fields, with special consideration in restrictive and obstructive lung diseases and in lung cancer. This Special Issue of *Life* calls for original research articles, brief reports, and review articles focusing on new diagnostic approaches and theranostic biomarkers in the field of lung disorders.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
