

## Special Issue

# Advances in Pathophysiology and Treatment of Thrombosis

### Message from the Guest Editor

Thrombosis refers to localized clot formation that obstructs the normal flow of blood in arteries, veins or in the microvasculature. Diseases in which this pathologic process occurs include myocardial infarction, ischemic stroke, and venous thromboembolism. Although these disorders are among the most common causes of morbidity and mortality worldwide, their underlying pathophysiology is not fully understood. Due to the different pathogenic changes in arterial and venous thrombosis, antithrombotic drugs target either platelets or plasma proteins involved in hemostasis. They both cause bleeding as their most major negative side effect. A better understanding of the pathophysiology of hemostasis and thrombosis is crucial for a more effective and safer treatment of thrombotic diseases. This Special Issue focuses on novel insights and recent advances in this field.

## About the Journal

### Message from the Editor-in-Chief

*Life* (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

### Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona  
Institute of Science and Technology, 08028 Barcelona, Spain

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
