Special Issue Gear Tribology

Message from the Guest Editor

Gears are unquestionably crucial parts in a mechanical system. A well-functioning gear is directly dependent on the quality of its lubrication, and its lifetime is dependent on the friction- and wear dynamics in the system. To be able to optimize the performance of a gear and its lifetime, an understanding of the tribological mechanisms in the system is vital. Due to the inherent multidisciplinarity of tribology, with intersecting areas such as rheology, fluid and solid mechanics, contact mechanics, material sciences, and chemistry, the complexity of lubrication, friction and wear dynamics in gears is highly prominent. The current Special Issue is devoted to the latest developments and findings in the versatile area of gear tribology. This Special Issue cover both the functionality of gears by means of the tribology aspects, and the modelling of issues related to gear performance such as lubrication and wear. Potential topics include, but are not limited to:

- Gears
- Gearboxes
- Friction
- Lubrication
- Wear
- Modelling
- Experiments

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Homer Rahnejat School of Engineering, University of Central Lancashire, Preston PR1 2HE, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2024).
