

Special Issue

Advances in Computer-Aided Technology II

Message from the Guest Editors

Following the success of the previous Special Issue “Advances in Computer-Aided Technology” (https://www.mdpi.com/journal/machines/special_issue/computer_aided), we are pleased to announce the next in the series, entitled “Advances in Computer-Aided Technology II”. Computer-aided technologies (CAx) encompass the use of computer technology to aid in the design, analysis, and manufacture of products. Significant progress has also been made in this area, due to the rapid expansion of science and technology. Advanced CAx tools combine many different aspects of product lifecycle management (PLM), including design, finite element analysis (FEA), manufacturing, production planning, and product. In connection with the transition to Industry 4.0, the concept of the digital twin comes to the fore, and existing CAx systems must also adapt to this trend. Industry 4.0 is dominated by concepts such as IoT, 3D printing, robotics, digitalization, 3D scanning, big data, and virtual and augmented reality, among others.

About the Journal

Message from the Editor-in-Chief

Machines is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided.

There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

Editor-in-Chief

Prof. Dr. Antonio J. Marques Cardoso
CISE–Electromechatronic Systems Research Centre, University of
Beira Interior, Calçada Fonte do Lameiro, P-6201-001 Covilhã, Portugal

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2
(Control and Optimization)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2024).
