

Special Issue

Synthetic, Natural and Natural-Synthetic Hybrid Magnetic Structures: Technology and Application

Message from the Guest Editors

This issue is devoted to the study of magnetic structures, including magnetic nanoparticles, of three main classes: synthetic structures, natural structures, and hybrid natural–synthetic structures. The issue also addresses theoretical modeling tasks, the practical use of these magnetic structures in solving technical and biomedical problems is also considered. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Magnetotactic bacteria, being in nature, cultivation, isolation of magnetosomes;
- Features of physical and chemical properties and magnetic state of magnetosomes;
- Magnetic structures based on natural magnetic ores, their study, and possible applications;
- Synthetic magnetic structures, including nature-like and biomimetic;
- Hybrid magnetic structures based on synthetic and natural components for microwave absorption, biomedicine, and other applications;
- Micromagnetic modeling of natural, synthetic, and hybrid magnetic structures;
- New methods of synthesis and study of magnetic structures.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Carlos J. Gómez García
Department of Inorganic Chemistry, Faculty of Chemistry, University of
Valencia, C/Dr. Moliner 50, 46100 Burjassot, Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore -
Q2 (Chemistry (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
