

Special Issue

Computational Chemistry in Nuclear Magnetic Resonance

Message from the Guest Editor

Dear Colleague, Accurate quantum chemical modeling of NMR spectra is deeply involved in the NMR structural assignment of compounds that are currently of utmost importance in both organic and inorganic chemistry. The development of new effective approaches and computational tools capable of providing very accurate NMR chemical shifts and spin-spin coupling constants is at the cutting edge of modern computational NMR spectroscopy. Since the first application of perturbation theory to NMR properties by Ramsey over 70 years ago, computational methodology has taken a great strides due to both the accelerated progress of computer techniques and the development of electronic theory. This Special Issue entitled *Computational Chemistry in Nuclear Magnetic Resonance* will provide researchers with the opportunity to publish their most recent discoveries in the field of high-quality computational methodologies relating to NMR spectral parameters. Dr. Irina L. Rusakova

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Carlos J. Gómez García
Department of Inorganic Chemistry, Faculty of Chemistry, University of
Valencia, C/Dr. Moliner 50, 46100 Burjassot, Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore -
Q2 (Chemistry (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 15.8 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the second half of 2024).
