Reviews on Slow-Relaxation Molecules

Message from the Guest Editors

The discovery of the first Single Molecule Magnet and the first Single Chain Magnet, making the investigation of slow relaxation of the magnetization phenomena became a field of intensive interdisciplinary research. Beyond their relevance in Physics and Chemistry, one expects spectacular applications in quantum computing and high-density information storage from these molecules. In the last twenty years or so, a huge number of mono- and oligo-nuclear complexes, 1D coordination polymers, homo- and hetero-spin systems have been synthesized and the investigation of their dynamic magnetic properties revealed the determinants influencing the relaxation phenomena. The subtle factors influencing the magnetic anisotropy are more and better understood. This understanding further serves as a guide for the design of new, and higher performant SMMs and SCMs. An important step towards applications was achieved by organizing SMMs on surfaces. We think that a collection of review articles presenting the state-of-the-art in this exciting field will be useful for researchers as well as for students.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Carlos J. Gómez García
Department of Inorganic Chemistry, Faculty of Chemistry, University of
Valencia, C/Dr. Moliner 50, 46100 Burjassot, Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore -
Q2 (Chemistry (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
