Explainable Machine Learning

Message from the Guest Editors

Dear colleagues, Machine learning methods are currently used widely in commercial applications and in many scientific areas. There is an increasing demand to understand the way a specific model operates and the underlying reasons for the decision produced by the machine learning model. In the natural sciences, where ML is increasingly employed to optimize and produce scientific outcomes, explainability can be seen as a prerequisite to ensure the scientific value of the outcome. In societal contexts, the reasons for a decision often matter. Typical examples are (semi-)automatic loan applications, hiring decisions, or risk assessment for insurance applicants. Here, one wants to gain insight, also due to regulatory reasons and fair decision making, why a model gives a certain prediction and how this relates to the individual under consideration. For engineering applications, where ML models are deployed for decision-support and automation in potentially changing environments, an assumption is that with explainable ML approaches, robustness and reliability can be realized more easily.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), dblp, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.8 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the second half of 2024).

Journal Rank:

JCR - Q2 (Computer Science, Artificial Intelligence) /
CiteScore - Q1 (Engineering (miscellaneous))
