

Special Issue

Bio-Active Components from Marine Sponges

Message from the Guest Editors

This Special Issue focuses on bioactive components derived from marine sponges, and offers researchers the opportunity to publish original work on various topics, including: natural products derived from sponges and their associated micro-organisms; the presentation of biological activities in many domains, whether for health-related, environmental, or biotechnological applications; and chemical ecology studies. Sustainable production via chemical synthesis and bioproduction through the culture of these bioactive specialized marine metabolites are of a great interest in the context of blue chemistry. In this Special Issue, we welcome papers on all of these chemical, biological, and ecological aspects.

Guest Editors

About the Journal

Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Editor-in-Chief

Prof. Dr. Bill J. Baker

Department of Chemistry, University of South Florida, 4202 E. Fowler Ave., CHE 205, Tampa, FL 33620-5250, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmacology, Toxicology and Pharmaceutics (miscellaneous))
