Enzyme Inhibitors of Marine Origin

Message from the Guest Editor

Marine natural products have recently received increased attention as a source of lead compounds for drug discovery. These compounds are initially identified based on bioactivity screens and their mode of action is largely unknown. Discerning their mode of action is a critical step in their further development as potential drugs. Many of such lead compounds are enzyme inhibitors. This Special Issue focuses on such marine-derived natural products or their analogs that are enzyme inhibitors. The coverage includes the biological activities of the lead compounds, identification of the target enzyme, location of the enzyme binding site and the mechanistic details of the enzyme inhibition. We aim to publish both original research articles and review articles in this Special Issue.

About the Journal

Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmacology, Toxicology and Pharmaceutics (miscellaneous))
