In Vitro and In Vivo Approaches in the Driving Seat of Marine Drugs Discovery

Message from the Guest Editors

Despite three centuries of great scientific discoveries, the truth about oceans and their organisms remains elusive. Natural products, medicinal and synthetic chemists along with pharmacologists, biochemists, cell biologists and microbiologists united their forces to unleash hidden treasures of oceans and seas. New classes of secondary metabolites were discovered from marine organisms with an unprecedented spectrum of biological activities. Several compounds entered the drug pipeline and many others are in various stages of clinical trials. Scientists used all available biological assays to screen marine organism extracts and fractions to zoom in on the most important compounds. This Special Issue of *Marine Drugs* entitled “In Vitro and In Vivo Approaches in the Driving Seat of Marine Drugs Discovery” focuses on presenting the most recent advances in biological assays applied for the discovery of marine secondary metabolites with potential biological activities. Full research papers and review articles reporting the applications of in vitro and in vivo assays to reveal biological activities of marine natural products, will be considered.

About the Journal

Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmacology, Toxicology and Pharmaceutics (miscellaneous))
