Optical Characterization and Applications of Metallic Thin Films

Message from the Guest Editor

Metallic thin films are important parts of various devices used in microelectronics and optoelectronics. Noble metals (NM) are used as a conducting layer between oxide films and as a replacement for transparent conductive oxides (TSOs). These structures exhibit high conductivity and enough transmission in the visible spectral range, and they are suitable for use on flexible substrates. NM-alloys connect low electric resistivity of noble metal with a low melting temperature of Sn or In. Obviously, we cannot forget about the plasmonic effects of metallic thin films which are utilized in, e.g., optical sensors. The sensing mechanism of such a system is based on two phenomena: surface plasmon resonance (SPR) and localized surface plasmon resonance (LSPR). In SPR and LSPR, the optical constants of metallic films (and surrounding medium), which strongly depend on growing conditions, are crucial parameters affecting the operation of the system. The aim of this Special Issue of *Materials* is to present the optical properties of metallic thin films which can be used in micro- and optoelectronics.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q1 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q2 (Condensed Matter Physics)
