

Special Issue

Advances and Frontiers in Magnetostrictive Materials

Message from the Guest Editor

You are cordially invited to submit contributions to this Special Issue, which aims to publish highly rated manuscripts presenting recent developments and applications of a broad range of magnetostrictive materials including material development, design and fabrication of sensor systems, theoretical considerations, numerical simulations and experimental results. Papers exploring the research frontiers of magnetostrictive materials and their applications are explicitly welcome. Topics include but are not limited to the keywords listed as follows: Giant magnetostriction Magnetomechanical effects Magnetostrictive materials in sensor technology Magnetostrictive materials in actuator technologies Magnetostrictive materials in energy harvesting Magnetostrictive polymer composites Magnetostrictive materials in magnetoelectricity Non-Joulian magnetostriction Self-sensing with magnetostrictive materials Straintronics Technology of magnetostrictive materials

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.
