

Special Issue

Differential Games and Its Applications

Message from the Guest Editors

The theme of this Special Issue is focused on differential games and the latest developments. The theory of differential games finds application in conflict problems which are treated through the use of differential equations. This problem lies between classical game theory, in which multiple players are involved, and controlled dynamic systems, in which differential equations describing the game are controlled by players. In fact, such games are among the most widespread, challenging, and important optimization problems facing mobile agents. There is a wide area of application for these games, ranging from simple traffic control in the rush hour of a large city to military strategy, such as missile guidance systems formulated by Rufus Isaacs, to surgery and management, and there are different kinds of hunting escape games, such as dynamic zero-sum games, instant games optimized for time, and so on. Within games where the evolution of strategies depends on continuous time, it is also necessary to remember differential games with incomplete information.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana

School of Computer Science and Informatics, De Montfort University,
The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.3 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).
